

## Installing new language step by step

1. Run Vistalizer, allow **UAC** prompt if requested (it is enabled by default).

2. Press **Add languages** and open language pack(s): MUI (\*.exe, \*.cab) or LIP (\*.mlc).

3. Wait for the language pack to be loaded, its integrity will be verified as well.

4. You may optionally change the installation mode in the table. Then press **Install language(s)**.

5. Wait for the installation process to complete:  
**Express** or **Internal** mode.

6. Confirm to change the current display language to the new language (can be

done later).

**7. Express languages** usually need to be updated after the very installation (steps 7-10).

**8. Press Update languages:** the list of necessary updates is shown, see details in Help.

**9. If applicable:**  
Download and open the required Windows update standalone installer **within Vistalizer.**

10. All necessary Express languages will be updated within a few seconds.

11. Exit program to restart the system for the changes to take effect (new display language).
